#### **Bry-Air (Asia) launches EcoDry, world's most energy-efficient Green Dehumidifiers**

**B**ry-Air, India's leading dehumidifier equipment manufacturer - has launched a new series of green dehumidifiers, EcoDry. The new series has been launched simultaneously in USA, Europe, China, Japan and Asia and will help industrial users attain up to 45 percent energy savings.

The new EcoDry dehumidifiers incorporate the BrySmart EMS (Energy Management System) technology. Unlike the present product technologies and control systems, BRYSMART EMS, is a microprocessor-based, cutting-edge dehumidification control system, based on inputs of several key parameters, processing these with in-built algorithm and modulating various devices/components in the system to optimize energy usage based on varying ambient conditions and internal sensible & latent loads. Existing Installations can also save energy up to 45 percent by retrofitting their existing installations with EcoDry Dehumidifier with BrySmart EMS. This will result in less energy consumption resulting in lower electricity bills.

Bry-Air Asia mainly owns the recent patent (pending) for this innovation. The technology has being jointly introduced in the market place along with its associates, Bry-Air, USA. This is the 9th patent to the credit of the Bry-Air group.
