Dehumidifiers

Bry-Air, India's leading dehumidifier equipment manufacturer, has launched a new series of green dehumidifiers, EcoDry. The new series has been launched simultaneously in the USA, Europe, China, Japan and Asia and will help industrial users attain up to 45% energy savings. EcoDry

dehumidifiers incorporate the BrySmart EMS (Energy Management System) technology. Unlike the present product technologies and control systems, BrySmart EMS, is a microprocessor-based, cutting-edge dehumidification control system, based on inputs of several key parameters, processing these with in-built algorithm and modulating various devices/components in the system to optimise energy usage based on varying ambient conditions and internal sensible and latent loads. Existing installations can also save energy up to 45% by retrofitting their existing installations with EcoDry Dehumidifier with BrySmart EMS. This will result in less energy consumption resulting in lower electricity bills.
